

# PROJECT OBJECTIVE

- The main objective of this project is to estimate the crop yield production and create an interactive dashboard.
- This estimation of crop yield is done by learning the dataset.
- By creating interactive dashboard , the farmers can be able to find out which crops has to be sown in the particular season.
- This avoids human biasness.
- This reduce the productivity losses .

**By the end of this project , you will be:**

**-Know fundamental concepts and can work on IBM Cognos Analytics.**

**-Gain a broad understanding of plotting different graphs.**

**-Able to create meaningful dashboards**
